A robust long lasting answer to the problem of secure panel fastening

Cross Recess
Version

Benefits:

- Security - stays locked in place
- Consistent performance
- Flush fitting and quick to operate
- Durable with high cycle life
- Choice of head styles

Bail Handle
Version

Tool Operated

CROSS RECESS
PLAIN FIXING HOLES
200-1000 SERIES

CROSS RECESS
COUNTERSUNK FIXING HOLES
(1MM MIN PANEL THICKNESS)
200-1100 SERIES

Hand Operated

BAIL HANDLE
PLAIN FIXING HOLES
200-5000 SERIES

BAIL HANDLE
COUNTERSUNK FIXING HOLES
(1MM MIN PANEL THICKNESS)
200-5100 SERIES

SHIM 0.8MM
205-9008

SHIM 1.5MM
205-9015

RECEPTACLE
205-1000

Specifying your AeroLoc

- 1 Select head style and plate fixing (see above).
- 2 Measure your panel (P) and frame (F) and add them together. This is the grip size (G) required (see diagrams above).
- 3 Refer to Table 1 and select the stud part number for your grip (G).

TABLE 1

200-1000 Series	200-1100 Series	200-5000 Series	200-5100 Series	GRIP		SHIM	RECEPTACLE
				MIN	MAX		
200-1007	200-1107	200-5007	200-5107	3.55 (0.14)	4.30 (0.17)	205-9015	205-1000
200-1007	200-1107	200-5007	200-5107	4.30 (0.17)	5.10 (0.20)	205-9018	205-1000
200-1007	200-1107	200-5007	200-5107	5.10 (0.20)	5.85 (0.23)	N/A	205-1000
200-1008	200-1108	200-5008	200-5108	5.85 (0.23)	6.60 (0.26)	N/A	205-1000

AeroLoc panel and frame preparation

AeroLoc fasteners are grip range sensitive. To ensure the panel seats correctly for a given grip range, it is important that any protrusions below the panel from the stud assembly fixings are taken into account.

If you are using a 200-1100 or 200-5100 style stud assembly riveted from above, provision needs to be made for the rivet bodies in the frame.

This can be achieved by rotating the receptacle fixing hole position by 35 degrees and drilling 2 x 5.0mm clearance holes for the stud assembly rivet bodies.

Typical assembly 200-5007 Bail Handle
